

How to decode P/N of Start.LAN's cabinets?

Start.LAN cabinets are marked with products numbers created in a way which let to include information connected to their basic features. This guide teach how to decode P/N to learn what kind of cabinet we deal with, even without touching the box!

Example:

— **First part defines type of the cabinet:**

- **STLFSC** – floor standing cabinets
- **STLWMC** – wall mounted cabinets 19"
- **STLWMC10C** – wall mounted cabinets 10"

— **Second part gives us size of the cabinet expressed in U -**

standard unit of height for rack components

— **Third part is used only for 19" cabinets and defines external size** – width and depth:

- First number (6 or 8) gives us width, it's respectively 600 and 800mm
- Second number (45, 6, 8 or 10) gives us depth. Basing on these, we can read cabinet's depth as 450, 600, 800 or 1000mm. Possible combinations of width and depth are different for different types of cabinets.

— **Fourth part defines type of front and rear doors and the color.**

- First letter tells us front door type and second letter - rear door type.
 - S** – solid steel doors
 - G** – doors with glass
 - P** – perforated steel doors
 - D** – double swing perforated steel doors
- Third letter of this part defines color of the cabinet, where:
 - B** – means Jet Black (RAL9005)
 - G** – means Light Grey (RAL7035)

— **Fifth part is optional.**

In this moment only one value is being used and it's letter C. This is used to mark cabinets which can be converted from wall mount type to floor standing type.
